PHP static code analysis

Unique rules to find Bugs, Vulnerabilities, Security Hotspots, and Code Smells in your PHP code

All rules **268**

Vulnerability **40**

Bug **51**

Security Hotspot **33**

Code Smell **144**

Tags

Search by name...

be used to end lines

Code Smell

More than one property should not be declared per statement

Code Smell

The "var" keyword should not be used

Code Smell

"<?php" and "<?=" tags should be used

Code Smell

File names should comply with a naming convention

Code Smell

Comments should not be located at the end of lines of code

Code Smell

Local variable and function parameter names should comply with a naming convention

Code Smell

Field names should comply with a naming convention

Code Smell

Lines should not end with trailing whitespaces

Code Smell

Files should contain an empty newline at the end

Code Smell

Modifiers should be declared in the correct order

Code Smell

An open curly brace should be located at the beginning of a line

"empty()" should be used to test for emptiness

Analyze your code

Code Smell Minor clumsy

Using `count ()` to test for emptiness works, but using `empty ()` makes the code more readable and can be more performant

Noncompliant Code Example

```
if (count($a) > 0) { // Noncompliant
    echo $a[0];
}
```

Compliant Solution

```
if (!empty($a)) {
    echo $a[0];
}
```
