Code Smell (144)

ne asea to ena imes Code Smell More than one property should not be declared per statement A Code Smell The "var" keyword should not be used

A Code Smell

"<?php" and "<?=" tags should be used

A Code Smell

File names should comply with a naming convention

A Code Smell

Comments should not be located at the end of lines of code

Code Smell

Local variable and function parameter names should comply with a naming convention

A Code Smell

Field names should comply with a

naming convention

Code Smell

Lines should not end with trailing whitespaces

Code Smell

Files should contain an empty newline at the end

Code Smell

Modifiers should be declared in the correct order

Code Smell

An open curly brace should be located at the beginning of a line

```
"switch case" clauses should
not have too many lines of
code
```

Analyze your code

brain-overload

The switch statement should be used only to clearly define some new branches in the control flow. As soon as a case clause contains too many statements this highly decreases the readability of the overall control flow statement. In such case, the content of the case clause should be extracted into a dedicated method

Noncompliant Code Example

With a threshold of 5:

```
switch ($var) {
 case 0: // 6 lines till next case
   methodCall1();
   methodCall2():
   methodCall3();
   methodCall4();
   break;
 default:
    break;
```

Compliant Solution

```
switch ($var) {
 case 0:
    doSomething();
   break:
 default:
   break;
function doSomething(){
 methodCall1("");
 methodCall2("");
 methodCall3("");
 methodCall4("");
```
