Code Smell

More than one property should not be declared per statement

A Code Smell

The "var" keyword should not be used

A Code Smell

"<?php" and "<?=" tags should be used

A Code Smell

File names should comply with a naming convention

A Code Smell

Comments should not be located at the end of lines of code

Code Smell

Local variable and function parameter names should comply with a naming convention

A Code Smell

Field names should comply with a

naming convention

Code Smell

Lines should not end with trailing whitespaces

Code Smell

Files should contain an empty newline at the end

Code Smell

Modifiers should be declared in the correct order

Code Smell

An open curly brace should be located at the beginning of a line

Overriding methods should do more than simply call the same method in the super class

redundant clumsy

Search by name...

Overriding a method just to call the same method from the super class without performing any other actions is useless and misleading. The only time this is justified is in final overriding methods, where the effect is to lock in the parent class behavior. This rule ignores such overrides of equals, hashCode and toString.

## **Noncompliant Code Example**

```
class Child extends Parent {
  public function func($n,$m) {
    parent::func($n$m); // Noncompliant
}
 public function func($n, $m) {
    // do something
}
```

## **Compliant Solution**

```
class Child extends Parent {
  public function func($n,$m) {
    parent::func($n$m);
    // do additional things...
}
class Parent {
 public function func($n, $m) {
    // do something
}
```

```
class Child extends Parent {
  // function eliminated
class Parent {
```

An open curly brace should be located at the end of a line
Code Smell

Tabulation characters should not be used
Code Smell

Method and function names should comply with a naming convention

Code Smell

Creating cookies with broadly defined "domain" flags is security-sensitive

Security Hotspot

```
public function func($n, $m) {

// do something
}
