PHP static code analysis

Unique rules to find Bugs, Vulnerabilities, Security Hotspots, and Code Smells in your PHP code

All rules 268 | 🔒 Vulnerability 40 | 🐛 Bug 51 | 🛡 Security Hotspot 33 | ☢ Code Smell 144

Tags ⌄   Search by name...

...be used to end lines
☢ Code Smell

More than one property should not be declared per statement
☢ Code Smell

The "var" keyword should not be used
☢ Code Smell

"<?php" and "<?=" tags should be used
☢ Code Smell

File names should comply with a naming convention
☢ Code Smell

Comments should not be located at the end of lines of code
☢ Code Smell

Local variable and function parameter names should comply with a naming convention
☢ Code Smell

Field names should comply with a naming convention
☢ Code Smell

Lines should not end with trailing whitespaces
☢ Code Smell

Files should contain an empty newline at the end
☢ Code Smell

Modifiers should be declared in the correct order
☢ Code Smell

An open curly brace should be located at the beginning of a line

An open curly brace should be located at the end of a line

Analyze your code

☢ Code Smell   ◆ Minor ?   🏷 convention

Shared naming conventions allow teams to collaborate effectively. This rule raises an issue when an open curly brace is not placed at the end of a line of code.

Noncompliant Code Example

```
if(condition)
{
  doSomething();
}
```

Compliant Solution

```
if(condition) {
  doSomething();
}
```

Exceptions

When blocks are inlined (left and right curly braces on the same line), no issue is triggered.

```
if(condition) {doSomething();}
```

Available In:

sonarlint | sonarcloud | sonarqube

⊗ Code Smell

An open curly brace should be located at the end of a line

⊗ Code Smell

Tabulation characters should not be used

⊗ Code Smell

Method and function names should comply with a naming convention

⊗ Code Smell

Creating cookies with broadly defined "domain" flags is security-sensitive
